May 28, 1992

Ms. Amrell Okonkwo
Permit Section
Minnesota Pollution Control Agency
520 Lafayette Road North
St. Paul, Minnesota 55155

Dear Ms. Okonkwo:

Enclosed is the additional information you requested in support of the application submitted to Lori Bartels by Interplastic Corporation on March 24, 1992, to connect the pilot plant to the thermal oxidizer at our facility at 2015 Northeast Broadway Street in Minneapolis, Minnesota. As stated in the above-referenced letter, while this is a minor emissions point, in the interest of optimizing air quality, I am again requesting that the Minnesota Pollution Control Agency expedite the approval process for this tie-in (see Attachment A).

Also enclosed is the information you requested on the existing boiler system that had not been previously identified as an emission source in our current Air Emission Permit. It was my belief that these boilers were not covered in the regulation which was in effect at the time of the issuance of our Air Emission Permit (see Attachment B).

Lastly, I have enclosed the specifications for the DCPD storage tank (Tank 20), as requested during our meeting on May 8, 1992 (see Attachment C). As indicated during that meeting, I was surprised that the MPCA required any further involvement in the construction of the proposed storage tank as it had been permitted for construction under Permit No. AT-90-031, acknowledged in a letter dated September 5, 1991, from Dan Rosenthal of the Tanks and Spills Section of the MPCA (see Attachment D).

Furthermore, according to Air Emission Permit No. 1176-86-OT-2, Amendment No. 3, dated July 31, 1991, Interplastic is granted the authority to tie the DCPD storage tank into the thermal oxidizer. Please do not hesitate to contact me if you have additional questions regarding these projects.

Sincerely yours,

Robert C. Hoffman,
Chief Environmental Officer
